

An extremely strong element forms the core of all our buildings.

Our belief in sustainability.

At the heart of every CDL building is a belief that cares for the one home we all share – planet earth.

Globally, the building sector is responsible for a third of the world's greenhouse gas emissions. Here in Singapore, it accounts for more than 16% of our nation's emissions.

So even though climate change is an issue all businesses have to address eventually, it's an especially pressing one for the building sector.

Here at CDL, we've long since started to make amends with mother earth.

Over a decade ago, we put our belief that sustainability makes a better, and more resilient, business model into action.

From design to construction, from procurement to maintenance, each stage of our development process now aligns closely with this commitment.

Further to this, we've also initiated capacity building and other green innovations to help the industry become more sustainable.

In 2011, we reduced carbon emissions of our corporate office operations and data centre to net zero. On top of this, we achieved a 7% carbon intensity emissions reduction from baseline year 2007 levels. For 2020, our target is a reduction of 22% from baseline year 2007 levels. And by 2030, we're targeting a 25% reduction.

These efforts have made us the only Singapore corporation listed in all three of the world's top sustainability benchmarks – The Dow Jones Sustainability Indexes, the FTSE4Good Index Series and The Global 100 Most Sustainable Corporations in the World.

Today, when you walk into any of our properties you'll find not just years of comfort and pleasure, but also our dream for a future that's cleaner, greener and brighter.

And as long as our buildings continue to be rooted in our values, it's a dream we're hopeful will last for generations to come.

That's our belief.
