

ENVIRONMENTAL SERVICES

IN THE MIDDLE EAST AND NORTH AFRICA

Saudi ASMA Environmental Solutions

LLC (SAES) is a Saudi company specialising in environmental consultancy, monitoring, contracting, laboratory services, geographical information systems (GIS) and equipment supply. Our vision is to be the leading company in the Middle East offering comprehensive environmental technology, engineering and consultancy services. We cover the kingdom of Saudi Arabia, the Middle East and North Africa regions. SAES is a joint venture company between Dr Fadil Fouad Basyyoni and ASMA Environmental Solutions of Malaysia.

SAES upholds a professional relationship with its clients, fostering partnership and long-term mutual growth, by providing cost-effective and sustainable solutions with the highest level of integrity.

At SAES, we believe in helping our clients by delivering quality solutions on time and on budget. Our integrated approach will ensure that our clients' projects will be financially, environmentally and socially sustainable.

Our multi-disciplinary team provides expertise and consultancy in environmental monitoring and management, pollution control studies and mitigation, urban development, infrastructure and related fields.

SERVICES

Environmental impact assessment studies.

We prepare comprehensive technical studies and documentation before project approval, in particular in relation to sanitary, industrial and hazardous landfills. Using the best techniques available globally, we help established industries to be compatible with international standards and to mitigate their environmental impact.

Ambient air quality monitoring. We deal with urban and industrial air pollution sources such as sulphur dioxide, nitrogen oxides, ozone, carbon monoxide and other hazardous air pollutants. Our monitoring techniques and equipment are in accordance with international standards.

Water quality monitoring. Our scope covers the physical, chemical and biological composition of different types of water (drinking water, groundwater, sea water, lake water, industrial waste and sanitary effluents). We have the capability to design, build, operate and maintain monitoring stations, and recommend the appropriate means of treatment, recycling or re-use.

Noise monitoring. We provide environmental, occupational and urban noise monitoring. Our project experience includes noise modelling and abatement solutions in power plants, airports, highways and residential areas.

Laboratories. We supply analytical and lab equipment according to the latest international techniques and standards, including maintenance and provision of technicians.

Waste management. We provide complete waste management services from design, technology assessment, surveying and consultancy to recycling and disposal, as well as city cleaning and pest control.

Environmental awareness. Experts offer training and capacity building courses for all levels of staff from both government and private sectors. ■
